

# ZANETIS

Power Attachments

- **Designed to cut asphalt and concrete, utility trenches, reclaim or stabilize pavement base.**  
Lower cost versus a dedicated milling machine at a higher level of horsepower over a skidsteer planer.
- **Available in 75, 140 and 200 horsepower versions with cutting widths of 30, 40, 60 and 72 inches.**  
Match a Roadhog model to your fleet and job requirements while maximizing your budget dollars.
- **All models features Deere or Caterpillar diesel engines coupled to a planetary gear hub mounted in the drum.**  
Tier 3 engine meets all current EPA requirements and is supported through a worldwide dealer network.
- **RoadHog mounts directly to the loader via pin on or quick coupler brackets.**  
This gives better visibility and safety while giving the operator better roading characteristics.
- **Wireless remote control allow operator to control all functions from up to 50 feet away.**  
This provides greater safety and also allows an optional second operator better visibility at ground level.
- **RoadHog is equipped with 4 depth cylinders and side skids for excellent grade control.**  
The Roadhog is capable of making precise, consistent shallow cuts prior to overlay or as deep as 12" for full depth base reclamation. ( Depth of cut on loader backhoe RoadHog models is 8" )
- **Tilt ( slope ) control adjusts drum angle to match pavement grade or to make bevel or header cuts.**  
This also allows the drum to be adjusted back to a level plane if the loader tires ride up on the milled material.
- **Sideshift feature allows the drum to be shifted from center to operator's right.**  
This gives the operator the ability to position the drum laterally for shoulder work.
- **RoadHog's tooth clearance from the tip of the tooth to the surface of the drum is 5 inches.**  
This distance greatly reduces drag in the cut, increasing overall production.
- **Optional 80 gallon pressurized water system provides many benefits.**  
Water reduces dust ( which increases visibility and saves on filter life) while increasing tooth life by 35%.
- **The Roadhog carries an unmatched 12 month parts and labor warranty.**

Made with pride in the U.S.A. in Brownsburg, Indiana
